and Bootstrap

Back-End:

Node.js, Express.js, REST, APIs,
SQL, JSON, MySQL, MongoDB,
Mongoose and Git

Programming Languages:

C++, JavaScript, TypeScript

PROFILE

Having produced "Hello World" in the console of my first application, I knew I was hooked on software development. But my career in software development has never been "just a job"; it has always offered me the opportunity to constantly learn and improve my skills. Since the day I began programming I have grown from a simple "Hello World" to a full-fledged passion that only generates more and more excited as time goes on.

WORK EXPERIENCE

Miley's Portfolio (shorturl.at/cehi6)

January-March, 2022

A portfolio website that displays the owner's portfolios.

- Communicated with the client to determine the website's design.
- Used React.js to convert the designed template into JSX code, and CSS3 to achieve animation effects.
- Reduced backend storage costs by 100% by using Emial.js to manage visitor emails.
- Utilized React Router to navigate each portfolio listed on the website

One Book (shorturl.at/deuw0)

Jun-July, 2022

Online Chinese Fiction website that provides free API access to 90% of free fiction.

- Built a frontend for a web application that displays JSON input from an API using React Typescript.
- Fetched API data using Axios HTTP requests.
- Used of SCSS improved the readability and efficiency of the website's complex styling code by 50%.

Course Register (shorturl.at/dgkVX)

April-May, 2022

Full-stack project for obtaining and posting courses.

- Implemented the Client-side with React.js to accept user data and send it to the backend.
- Utilized Express.js to manage users' data and store them in MongoDB.
- Implemented Web and Mobile Apps that validate the input data to prevent malformed input; enhanced data aggregation performance by 60%.
- Validated a user's login input with Joi validation and encrypted user information with JWT when a login request was received.
